HB vs Nesterov stability boundary
$1-\rho = 1e-06$, $\beta = 1.5$, $s = 3$
$K = 2000$, MA window=50, threshold=1
$B = 2^0 \ldots 2^7$, $\eta \in [1e-03, 8e+00]$
HB: empirical max stable η
HB fit: $\eta \propto B(1-\rho)$
Nesterov: empirical max stable η
Nesterov fit: $\eta \propto B^{\beta}(1-\rho)$, $\beta = 1.5$
