averaged stability regions over seeds
learning rate stability boundary η
batch size B
10^{0}
10^{-1}
10^{-2}
10^{-3}
2^{4}
2^{5}
2^{6}
below lowest boundary
between lowest and middle boundaries
between middle and highest boundaries
above highest boundary
SGD: mean max stable η over 5 seeds
HB: mean max stable η over 5 seeds
HB fit: $\eta \propto B(1-\rho)$
Nesterov: mean max stable η over 5 seeds
Nesterov fit: $\eta \propto B^{\beta}(1-\rho)$, $\beta = 1.5$
